

# Experiment – 6: Data Visualization Using Power BI

## AIM:

To visualize and analyze business sales data using Power BI by creating interactive dashboards consisting of various charts and graphs.

## Dataset Used:

Superstore Sales Dataset

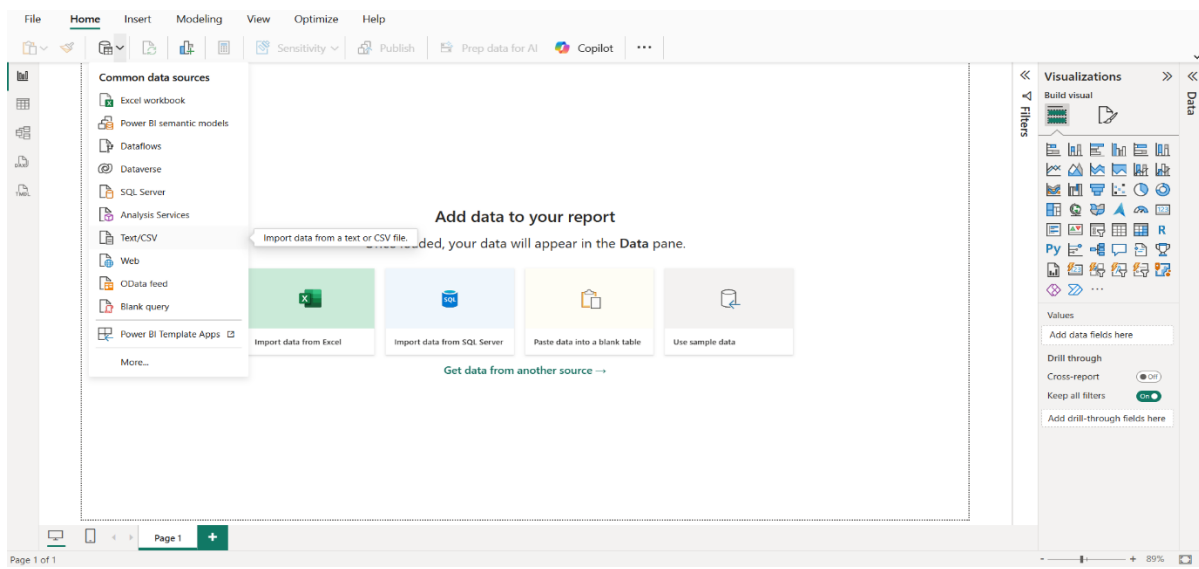

(Contains columns: Row ID, Order ID, Order Date, Ship Date, Ship Mode, Customer Details, Product Details, Sales, Quantity, Discount, Profit, etc.)

## PROCEDURE:

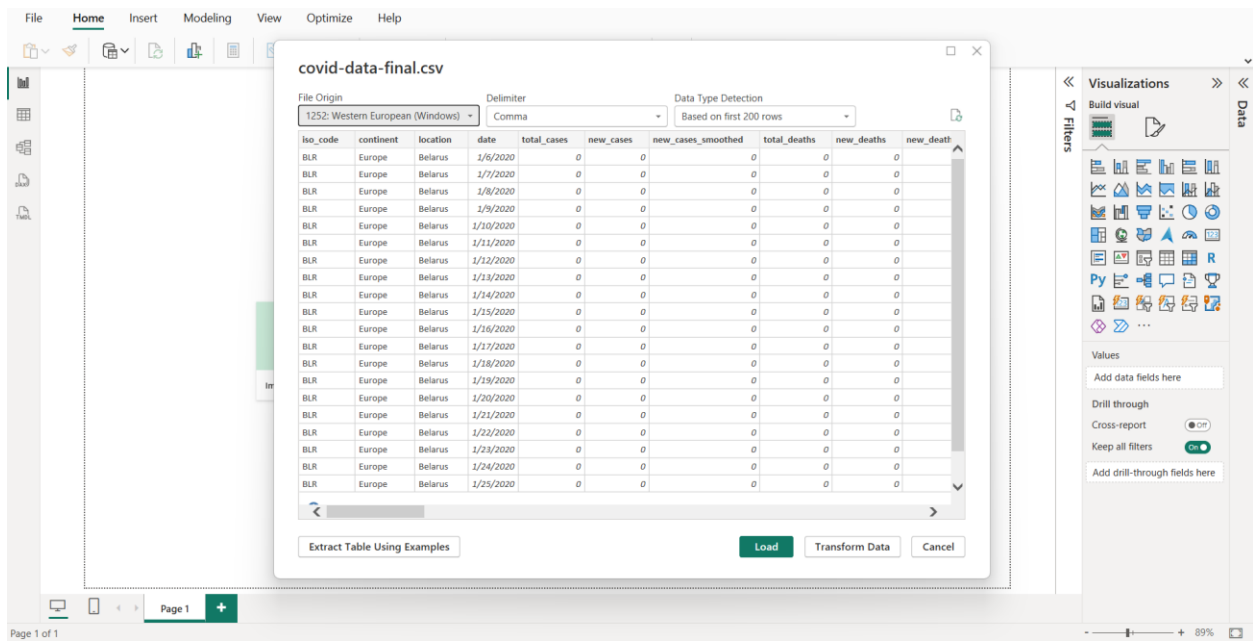

### 1) Importing Dataset into PowerBI desktop

Steps:

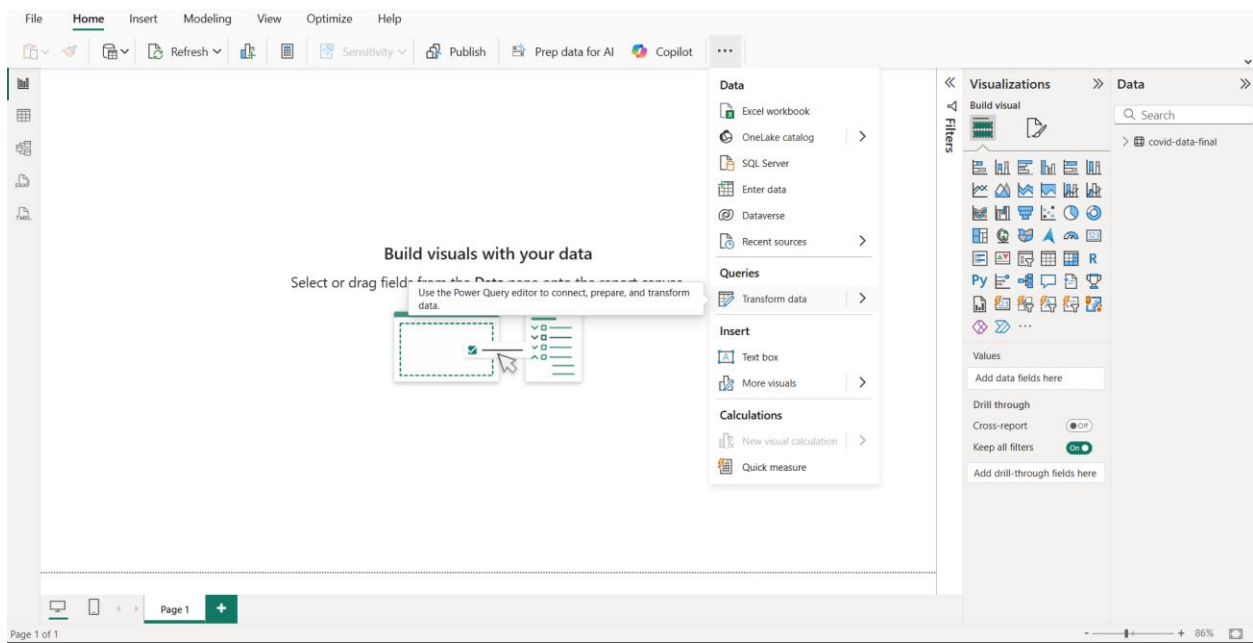

- Open Power BI Desktop.
- Click on “Get Data → Text/CSV” (or Excel, depending on your file).
- Browse and select the downloaded Superstore dataset.
- Click Load to bring the data into Power BI.

## 2) Previewing and Loading dataset into Power BI

## 3) Transforming data to clean dataset with the help of Power Query Editor

#### 4) Key Performance Indicators (Cards)

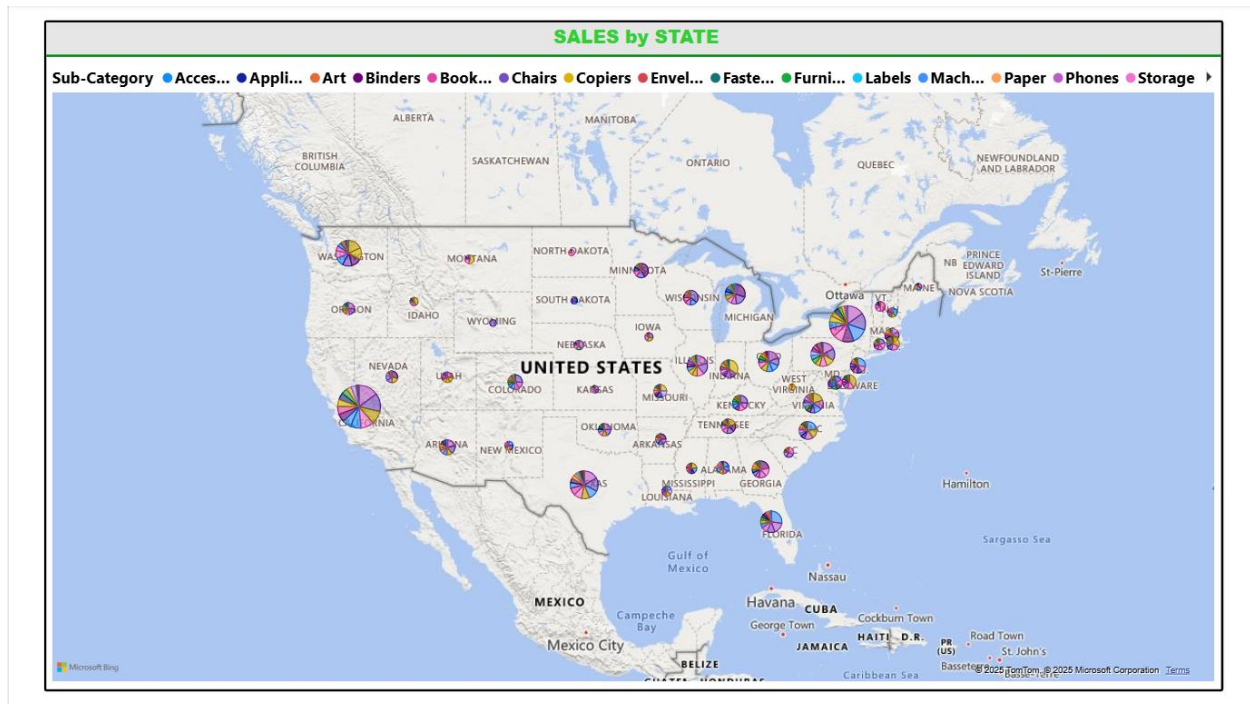

*(Card Visuals — Total Sales, Total Profit, Total Orders, Total Quantity)*

#### 5) Sales and Profit Trend Over Time

#### 6) Sales by State

## 7) Profit Distribution by Region

## 8) Sales by Segment and Category

## **RESULT:-**

All the required visuals were successfully created and combined into a single interactive Power BI Dashboard. The dashboard provides a comprehensive and clear view of sales performance, profit trends, and regional insights.
